### DETAILED ACTION

1. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, line 4, there is no antecedent basis for "the predicted displayed luminance value". Further, the claim as whole is incomplete and thus vague and indefinite because it is not clear how the predicted luminance values are determined. In other words, based on what criteria the predicted luminance values are determined or calculated. Correction and/or clarification is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Sekiya et al(2003/0006949A1).

Sekiya et al disclose an overdrive controller for driving a liquid crystal display device comprising receiving an image(3) and modifying the image by alternatively overdriving at least one pixel based upon a predicted displayed luminance value of the

Art Unit: 2629

pixel in a previous image to increase or decrease the at least one pixel's luminance output(see figures 1, 4-6; paragraphs[0010-0011], [0035-0036], [0046-0054] and [0056]).

As to claims 2-3, Sekiya et al also disclose that their image modification is between to consecutive frames and the predicted actual displayed luminance value is at state when the LCD material is not at an equilibrium state(see paragraphs [0011], [0015] and [0037-0041].

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Suzuki et al, Kubota et al, Feng et al, Sugino, Wong, Chen et al('931A1), Sekiya et al('793B2), Hughes et al, Lin et al and Chen et al('591) are made of record to show various types of overdrive controller for driving an LCD display device.
